Data Discovery for Earth Science
Connect

Solution

01

A webpage which gives maps with layers and datasets for researchers

02

It is user-friendly!

03

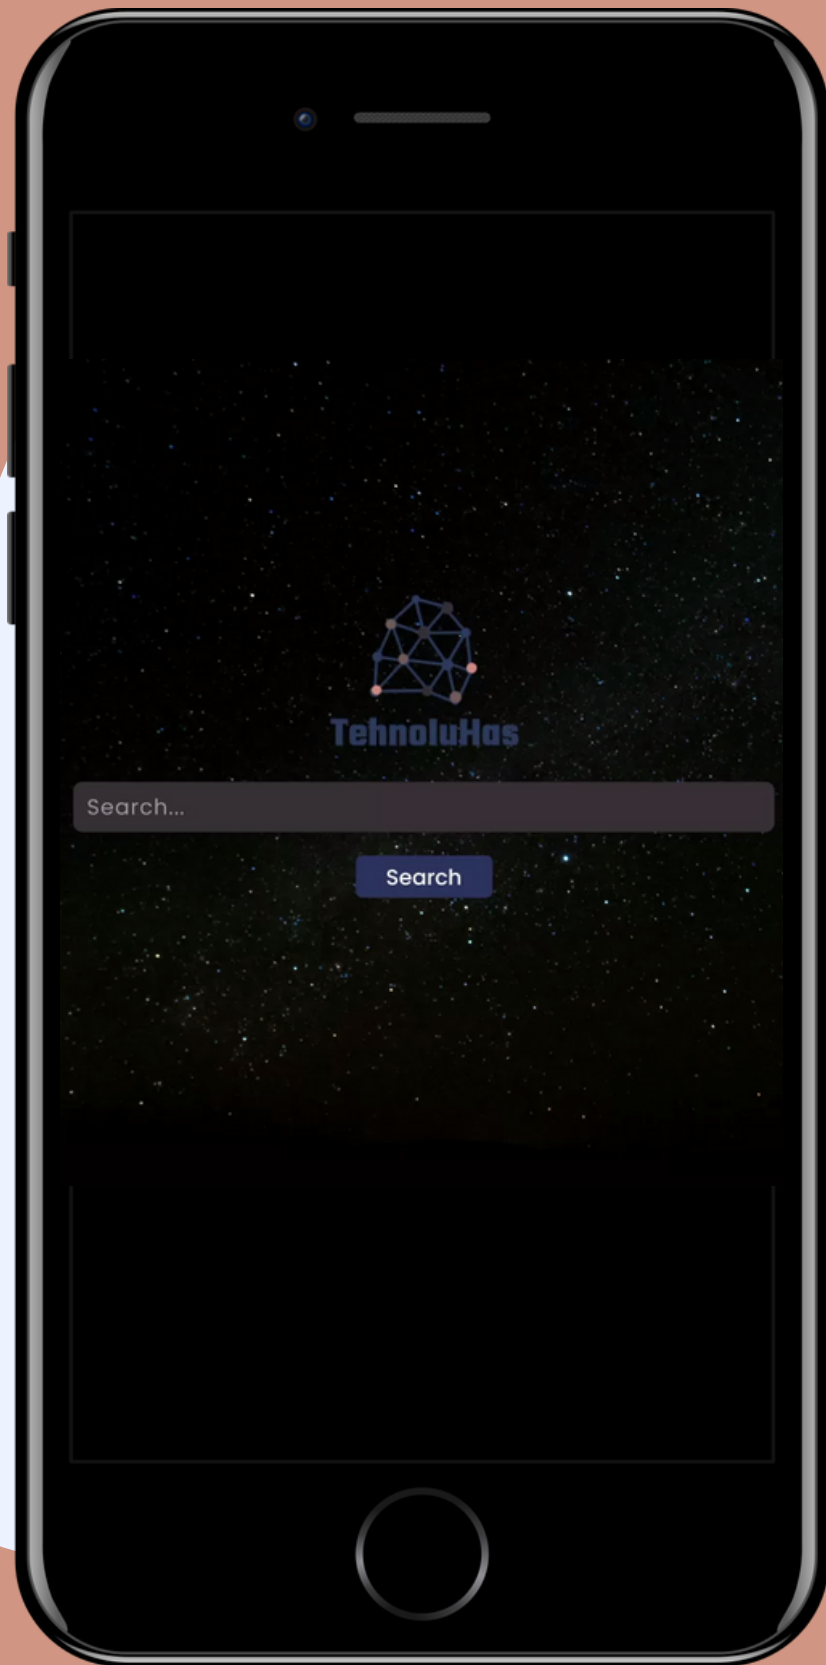

Minimize the amount of time to search, collect, and prepare data

How it Works

It's showtime! To view the demo of our searching tool is necessary just to enter `tehnoiuhas.ml` .

The entire webpage is made with html, css and java script

Pricing

We are interested in helping the researchers all around the world

Totally free

Where to Access

It can be accessed everywhere on the globe, not like some NASA webpages which works only in USA

What's Happening Next

We are going to improve the search tool. There are going to appear: interactive maps with layers from American, Japanese Space agencies, "Video" page helping to use and install the datasets, NLP maintenance, adaptable News bar and more user-friendly features
